1. The rated loads are determined according to DIN 15018 part 3(lifting class H2, loading group B2). The stability is according to EN13000 (2004).

The rated loads listed are based on the condition that the machine is stationed on firm, level ground.

The rated loads are available over 360 degrees. The rated loads shown include the weight of all lifting attachments. such as hook and bucket. The load to be actually lifted is the rated load minus the weight of all lifting attachments. 2. Counterweight is 3300kg fixed to crane.

3. Travelling is allowed according and provided that:

- surface must be firm and level

- the boom is in travelling direction

- speed is not above 0.4m/s (on a firm level ground)

- the load is near the ground (0.5m) and secured against swaying

- no other movements are allowed

4. * Denotes use of Additional Lifting Equipment

5. ** Standard reeving for working 1-2 or 5 reeving, for special cases 3 and 4 reevings possible to work.

6. At windforce of 14m/s or more the operation must be stopped. By windforce of 15m/s or more the boom must be retracted to the minimum and lowered to the ground.

7. For the wind load area of the rated load is 1,2m² per 1000kg calculated.

Working Range Diagram

Working Radius (m)

In crane operation with lifted load, jig angle range is restricted to 0° to 76°.
